Education

Stanford University Stanford, CA
M.S. in Computer Science *Sep. 2026 – Jun. 2028*

Purdue University West Lafayette, IN
B.S. in Computer Engineering with Honors & Highest Distinction, GPA: 4.0/4.0 *Aug. 2022 – May 2026*

- **Relevant Coursework:** Data Structures, Artificial Intelligence, Data Mining, Compilers, Computer Networks

Experience

Roblox San Mateo, CA
Software Engineer Intern *May 2026 – Aug. 2026*

- Developed recurring-alert memory layer for agentic AI incident response system, automatically selecting and injecting engineer-authored playbooks for relevant alerts into 200+ weekly PagerDuty alert investigations.
- Improved AI root-cause analysis by adding Sentry investigation capabilities and enhancing Grafana metric analysis with filtered time-series plots, statistical summaries, outliner detection, and anomaly context.
- Enhanced on-call engineer experience by surfacing accurate, recent Grafana plots and AI follow-up links directly in Slack alert threads. Reduced misleading or stale investigation context in Slack by 80%.
- Strengthened reliability and development for AI incident response service by adding Prometheus metrics, OpenTelemetry traces, Grafana dashboards, model retries, and stable unit and integration tests in CI.

ECELabs @ Purdue West Lafayette, IN
Software Engineer & Undergraduate Researcher (Part-Time) *Jun. 2024 – May 2026*

- Led full-stack development of digital design platform used by 270+ Purdue ECE students per semester, coordinating undergraduate contributors through sprint planning, issue tracking, code reviews, and releases.
- Rebuilt legacy platform using Vue.js, Vite, FastAPI, PostgreSQL, and Docker Compose, including modular workflows for remote file management, code editing, drag-and-drop circuit design, compilation, and testing.
- Developed browser-based FPGA testing workflows for 30+ custom boards connected through Raspberry Pi controllers, enabling students to reserve hardware, flash compiled designs, and inspect real outputs online.
- Managed production infrastructure across 10+ Linux servers, 50+ Kubernetes services, NFS storage, and metric monitoring, improving uptime by 80%, cutting API latency by 97%, and reducing production errors by over 90%.

Nano Neurotechnology Lab @ Purdue West Lafayette, IN
Undergraduate Researcher *Jan. 2024 – May 2026*

- Developed PyTorch models to decode volitional movement from high-density neural recordings in mice.
- Built multi-subject model search pipeline comparing wave, LFP, and neuron spike inputs across deep decoders and interpretable baselines, with held-out-animal generalization, model saliency, and ablation studies.
- Automated parallel GPU training on self-hosted GitHub Actions runners, streamlining result generation.
- Co-authored Nature Neuroscience manuscript and 5 posters, including Cosyne top 10% and SfN Barrels top 5%.

Leidos Huntsville, AL
Embedded Design Intern *May 2025 - Aug. 2025*

- Implemented and tested serial sensor drivers in FreeRTOS C/C++ and VHDL for embedded radar hardware.
- Automated and parallelized hardware test pipeline using Python & TCL, reducing cumulative test time by 73%.
- Built Python telemetry logger, inter-board UDP message handlers, and custom WebSocket-based Grafana data source in air-gapped RHEL environments, improving test telemetry with 10Hz live streaming of hardware metrics.

Technical Skills

Languages: Python, C/C++, TypeScript/JavaScript, SQL, Rust, SystemVerilog, MATLAB, Bash
Frameworks: FastAPI, React, Next.js, Vue.js, Node.js, Express.js, Flask, Pydantic AI, LangGraph
Infrastructure: Git, GitHub Actions, Docker, Kubernetes, ArgoCD, Linux, AWS, Vercel, Grafana, Sentry
Libraries: PyTorch, NumPy, pandas, SciPy, Scikit-learn, Matplotlib

Publications

Hammad F. Khan, Om T. Kolhe, Meisam Habibi Matin, Eduard Tanase, and Krishna Jayant. *Neural Delay Lines Synchronize Inter-Areal Motor Sequences.* Manuscript submitted for publication, 2026.
